

Limit 3rd Party Data Exposure in Collaboration Tools

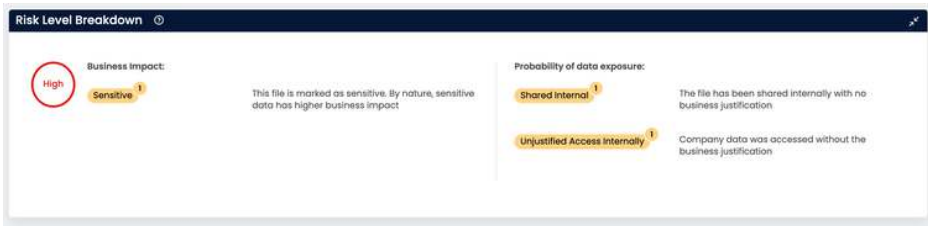

Legacy data security tools are unable to provide visibility into data flows across collaboration tools.

Do you know...

- What data is shared with vendors on Slack?
- What data is currently exposed to former partners on dormant channels?

CONTEXTUAL VISIBILITY & DETECTION

Reco maps the business to provide full data visibility in minutes

Reco understands expected behaviors, and detects unjustified actions

FIND OUT HOW RECO CAN HELP YOUR ORGANIZATION

Secure collaboration at the speed of business.

Only by understanding the complete business context of an interaction, can security analysts identify, interpret, and determine the best way to respond to potential threats.

Reco provides this business context.

VISIBILITY

See when:

- Vendors leave a project but still have data access permissions
- The other organization in a shared channel haven't locked it to unauthorized users
- What data is exposed to each third party across all tools

DETECTION

Reco immediately knows when:

- An employee shares customer information in the wrong group
- A vendor's access to your Slack channel is compromised
- A channel is no longer needed, and is lying dormant
